Molecular cloning and expression of the mouse N-acetylneuraminic
acid 9-phosphate synthase which does not have deaminoneuraminic
acid (Sin) 9-phosphate synthase activity

Blochem. Blophys. Res. Commun. 273 (2), 642-648 (2000)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                           ð
                                                 This sequence encodes a human glycosylation enzyme clone of the invention, designated HASAA37. The protein of this clone is a stalic acid synthetase. The sequences are useful as reagents for the differential identification of the tissues or call types present in a biological sample, as immunological probes, for treating a disease or condition resulting from under expression of such polypeptide, for the detection and/or treatment of disorders involving aberrant glycolysis, e.g. cramps, myoglobinuria, and as tumour marker and/or immunotherapy targets They may also be used to differentiate, proliferate and attract cells leading to the regeneration of tissues, to modulate mammalian characteristics to the regeneration of tissues, to modulate mammalian characteristics or anabolism processing, utilisation and energy storage, to change a manmal's mental state by influencing and as a food additive or sample, as a marker or detector of an immune system disorder, to inhibit cyckine activity, and as a vaccine. They may further be used to treat immune system or of haematopoietic cell deficiencies or disorders, blood coagulation disorders (e.g. thrombocytopaenia), wounds resulting from trauma or surgery, and an autoimmune or surgery, and an autoimmune disorders (e.g. thrombocytopaenia), wounds resulting from trauma or surgery, and an action of a sething or an autoimmune or surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        480

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes a method for manipulating carbohydrate processing pathways in cells of interest. The methods are used to manipulate multiple pathways involved with the sialylation reaction by using recombinant DNA technology and substrate feeding approaches to using recombinant DNA technology and substrate feeding approaches to sialylation of sialylated glycoproteins in the cells. The combinate the production of sialylated glycoproteins in the cells. The sialylation process involves the post-translational addition of the donor cubbrate cytidine monophosphate-sialic acid (GMP-SA) onto a specific acceptor carbohydrate. The cells express at least one enzyme, selected complex synthetase and GMP-SA transporter, above endogenous levels. The cells are useful for producing complex sialylated glycoproteins in cells of interest, especially insect cells. Glycoproteins containing sialylated clls are useful as vaccines, therapeutics and diagnostic colls scand diagnostic consistence in the value of heterologous expression systems are useful for application of heterologous cell expression products as vaccines, therapeutics and diagnostic characeutics and diagnostic colls as well as increasing the variety of the heterologous proteins that can be produced and lowering biotechnology contenses, which is used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ATCATTGCCGAGATCGGCCAGAACCACCAGGGCGACCTGGACGTAGCCAAGCGCATGATC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TACGCCGAGGAGGTTGGGATCTTCACTGCCTCTGGCATGGATGAGATGGCAGTTGAA 360
                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for manipulating glycoprotein production in an insect cell comprising enhancing expression of an cargyme, such as N acetylglucosamine-2 (GLNAc-2) epimerase, one catalysing conversion of UDP-GLONAc to mannose (Man) NAc, sialic acid synthetase, aldolase, cytidine monophosphate-sialic acid (CMP-SA) synthetase or CMP-SA transporter, where the expression of each enzyme is enhanced to above endogenous levels. The novel method is useful for manipulating glycoprotein production in an insect cell. Further methods of the invention are useful for producing slalylated glycoprotein. The useful as pharmaceutical compositions, vaccines, diagnostics and therapeutics. This polynucleotide sequence represents the DNA encoding a human SA synthetase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

The present sequence is unactor in uniqual count encouring stailed actor synthetase (see AAY96101), an enzyme that condenses ManNac-6-P or Man-6-P with PEP to form NeuSac and KDN phosphates, respectively. This novel complete termed SaS, was identified on the basis of homology with the scherichia coli neud gene using a bioinformatics based approach.

C Encherichia coli neud gene using a bioinformatics based approach.

Northern blots indicated ubiquitous transcription of the human synthetase compinantly engineered cells for producing plycoproteins having sialylated oligosaccharides. The methods involve altering the expression of enzymes involved in carbohydrate processing. A claimed cell producing sialylated glycoproferia at above endogenous levels expresses at least 1 (preferably human) enzyme selected from GLONAc-2 epimerase, an enzyme synthetase, andolase, CMP-sialic acid synthetase and adolase, CMP-sialic acid synthetase and cMP-sialic acid cransporter at above endogenous levels. Endogenous N-acetylglucosaminidase activity may be suppressed. A claimed method for acetylglucosaminidase activity may be suppressed. A claimed method for expression of 1 of the above enzymes, and a claimed method for sialylated glycoproteins involves expressing a heterologous protein cepper call by plasminogen, transferrin, Na+ K+-ATPase or thyrotropin) in the insect cell. Yeast, insect, fungal, plant and bacterial host cells can be engineered to produce new forms of sialylated glycoproteins and/or elevated concentrations of donor substrates (e.g. nucleotide sugars) required for eighter concentrations of donor substrates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATCATTGCCGAGATCGGCCAGAACCACCAGGGCGACCTGGACGTAGCCAAGCGCATGATC 120

                                                                                                                                                                                                                                                          ŏ
                                                                                                                                                                                                                                                                                                                            ð
      The invention relates to novel genes (ABL89449-ABL90853) and proteins candical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (art) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune discrders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoardial ischaemias; (d) wound healing contections diseases such as wiral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                              ö

encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form.

The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030104529.

The present invention describes primer sets for synthesising 5602 full-

(a) an oligo-dr primer and an oligomorlectide complementary to the

complementary strand of a polymuclectide comprises one of the 5602

complementary strand of a polymuclectide which comprises one of the 5602

complementary strand of a polymuclectide which comprises one of the 5602

complementary strand of a polymuclectides, or (b) a combination

of an oligomuclectide comprising a sequence complementary to the

complementary strand of a polymuclectide which comprises a 5'-end

sequence and an oligomuclectide comprising a sequence complementary to a

complementary strand of a polymuclectide which comprises a 5'-end

sequence and an oligomuclectide comprising a sequence complementary to a

complementary strand of a polymuclectide which complementary to a

complementary strand of a polymuclectide which complementary to a

complementary strand of a polymuclectide of sequence, where the

complementary strand of sequence is selected from those defined in the

configuration. The primer sets can be used in antisense therapy and in

complementary full-length cDNAs. The primers are also useful for the

complementary full-length cDNAs. The primers are also useful for the

configuration and/or diagnosis of the abnormality of the proteins encoded by

configuration without any specialised methods. AAH03166 to AAH13628

configuration of the main amino acid sequences; and AAH13629 to AAH13632 represent

coligomuclectides. all of which are used in the exemplification of the
Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; primer; detection; diagnosis; antisense therapy; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Yamamoto J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8; SEQ ID NO 12129; 2537pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hikawa T, Hayashi K, Saito K, Ya

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cyrostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, municipen's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/inhibin activity, chemclactic/chemchinetic activity, haemostatic assays for receptor activity, arthritis and theraper.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wang D;

```
The invention relates to novel isolated nucleic acid molecules (I) encoding human secreted proteins (II). (I) and (II) are used to prevent, creat or ameliorate a medical condition in e.g. humans, mice, rabbits, creat or ameliorate a medical condition in e.g. humans, mice, rabbits, creat not adops, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate expression of secreted proteins. (I) and complementary consequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may be inneed of restorative therapy. (II) may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of the secreted constitution of antibodies and antagonists may also be used as diagnostic agents for detecting the presence of (II) antibodies and activity of (II). The anti-(II) antibodies con may also be used as diagnostic agents for detecting the presence of (II) disorders include for example: immune/sorbant assay (ELISA)). The disorders include for example: immune/sorbant assay (ELISA)). The disorders include for example: immune/sorbant assay (ELISA). The anti-(II) antibodias and hyperproliferative disorders (e.g. Human immunodeficiency virus) infections, aneania, rheumatorid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. Parkinson's disease and Charcot-Marie-Tooth disease), cardio-/
Gaucher's disease and Charcot-Marie-Tooth disease), cardio-/
Cerebrovascular disorders (e.g. cardiac arrest, tachycardia, angina and thrombosis), infections caused by bacteria, viruses and fungi and cerebrand successions and subicons and subicons and subicons and subicons and subicons and support cell culture of primary tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acids and polypeptides, useful for diagnosing, preventing or treating medical conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 100; 753pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ruben SM;

The present invention describes primer sets for synthesising 5602 full-

(a) an oligo-dr primer and an oligonaclectide complementary to the

complementary strand of a polynucleotide which comprises one of the 5602

complementary strand of a polynucleotide which comprises one of the 5602

complementary strand of a least 15 nucleotides; or (b) a combination

of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a forest complementary to a

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide of sequence, where the

complementary strand of a polynucleotide of sequence, where the

complementary strand of sequence is selected from those defined in the

conjugantication. The primer sets can be used in antisense therapy and in

specification. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

cut the full-length cDNAs. The primers are also useful for the

cut cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

AAH13633 to AAH13632 represent human cDNA sequences; AAB93446 to AAB95893

crepresent human amino acid sequences; and AAH13629 to AAH13632 represent

constant invention of the accompliance of the processent invention of the accompliance of the accomplementary and and are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      250
                                                                                                                                                    Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide comprising a sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1006
oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence's relected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the primers are also useful for the the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs are also useful for the AAH13613 to AAH13612 to AAH13628 and AAH13613 to AAH13612 represent human amino acid sequences, and AAH13629 to AAH13629 represent coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                 455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGGTCACTGTTGAAGAGGATGACACCATCATGGAAGAATTGGTAGATAATCATGGCAAAA 1066

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           reaction (PCR) primers, oligomers, and for chromosome and gene mapping, reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal genes. (I) is useful in gene therapy techniques to restore normal cuseful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating polypeptide in tissue, as molecular weight markers and as a food superprine in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypuncleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and polypuncleotide sequences have applications on puny and proposed and polypup conterns of mutations and polypup content of markers and activity of the polypup content of mutations and polypup content of mutations and polypup content of mutations and polypup content content traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    486

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and to produce other types of data and products dependent on DNA amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   rcaaarcgrgaagccccrcaacccaacrrcrgcrrrrrgcagrgraccagcgcaracc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  reaccarrecearragestrarrerecescareaacaesecaraseceararerresee

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, dung toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form bart of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                  1022
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     846
                                                                                                                                                                                                                                                                  962
                                                                                                                                                                                                                                                                                                                     Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1023 GGATGACACCATCATGGAAGAATTGGTAGATAATCATGGCAAAAAAATCAAGTCTTAA 1080

The invention describes a method of identifying an agent that alters a mitochondrial function, comprising inducing Forkhead Related Activator-2 (FREAC-2) expression in a host cell in the presence and absence of a candidate agent, and screening for an agent which alters the level of apoptosis resulting from such induced FREAC-2 expression. The method is useful for identifying an agent that alters a mitochondrial function, cepecially apoptosis. The invention also describes a method for treating continuation also describes a method for treating a molecular target for therapeutic intervention for treating invention are useful for treating a disease associated with inappropriate content invention are useful for treating a disease associated with inappropriate cell proliferation or cell survival, in particular cancer, or a neurological disease or disorder including Alahaimer's disease (AD), multiple sclerosis (MS), parkinson's disease (PD), diffuse Lewy body disease (DLB), vascular dementia, amylotrophic lateral sclerosis (ALS), contending cepilepsy lactic acidosis and stroke (MELAS), myoclonic epilepsy and also autoimmune diseases. This sequence represents a polynucleotide in the invention and also autoimmune diseases. This sequence represents a polynucleotide incomment of invention and also autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCCTCCTGAAGACATCTTAATCTAGTGGGCAAGAAGGTCCTGGTCACTGTTGAAGAGGA 1025
